

# Contents

<b>Preface</b> .....	<b>xiii</b>
<b>1. Introduction</b> .....	<b>1</b>
1.1 Continuous and Discrete Control Systems .....	4
1.2 Open-Loop and Closed-Loop Control Systems .....	7
1.3 State Space and Transfer Functions .....	10
1.4 Mathematical Modeling of Real Physical Systems .....	13
1.5 Models of Some Control Systems .....	18
1.6 Linearization of Nonlinear Systems .....	22
1.7 MATLAB Computer Analysis and Design .....	32
1.8 Book Organization .....	33
1.9 References .....	33
1.10 Problems .....	34
<b>PART I — METHODS AND CONCEPTS</b>	
<b>2. Transfer Function Approach</b> .....	<b>41</b>
2.1 Frequency Domain Representations .....	42
2.1.1 System Transfer Functions .....	43
2.2 Block Diagrams .....	49
2.2.1 Modeling and Block Diagrams of a DC Motor .....	54
2.3 Block Diagram Algebra .....	57
2.4 Signal Flow Graphs and Mason's Rule .....	67
2.5 Sampled Data Control Systems .....	76
2.5.1 Open-Loop Transfer Functions .....	77
2.5.2 Closed-Loop Transfer Functions .....	80
2.5.3 Transfer Functions of Digital Control Systems .....	82
2.6 Transfer Function MATLAB Laboratory Experiment .....	84
2.7 References .....	86
2.8 Problems .....	87
<b>3. State Space Approach</b> .....	<b>95</b>
3.1 State Space Models .....	97
3.1.1 The State Space Model and Differential Equations .....	97
3.1.2 State Space Variables from Transfer Functions .....	101
3.2 Time Response from the State Equation .....	114
3.2.1 Time Domain Solution .....	114
3.2.2 Solution Using the Laplace Transform .....	120
3.2.3 State Space Model and Transfer Function .....	121

3.3 Discrete-Time Models . . . . .	122
3.3.1 Difference Equations and State Space Form . . . . .	122
3.3.2 Discrete Transfer Function and State Space Model . . . . .	123
3.3.3 Discretization of Continuous-Time Systems . . . . .	125
3.3.4 Solution of the Discrete-Time State Equation . . . . .	129
3.3.5 Solution of the Discrete State Equation by the $\mathcal{Z}$ -transform . . .	133
3.3.6 Response Between Sampling Instants . . . . .	134
3.3.7 Euler's Approximation . . . . .	135
3.4 The System Characteristic Equation and Eigenvalues . . . . .	137
3.4.1 Multiple Eigenvalues . . . . .	141
3.4.2 Modal Decomposition . . . . .	142
3.5 State Space MATLAB Laboratory Experiments . . . . .	144
3.5.1 Experiment 1—The Inverted Pendulum . . . . .	144
3.5.2 Experiment 2—Response of Continuous Systems . . . . .	146
3.5.3 Experiment 3—Response of Discrete Systems . . . . .	148
3.6 References . . . . .	150
3.7 Problems . . . . .	151
<b>4. Linear System Stability . . . . .</b>	<b>159</b>
4.1 Stability Concept and Main Definitions . . . . .	161
4.2 System Eigenvalues and Stability . . . . .	162
4.2.1 Stability of Distinct Eigenvalues . . . . .	162
4.2.2 Stability of Multiple Eigenvalues . . . . .	164
4.2.3 Case Studies . . . . .	167
4.2.4 Jordan Canonical Form . . . . .	168
4.2.5 Multiple Eigenvalues on the Imaginary Axis . . . . .	175
4.2.6 Case Study: Flexible Space Structure . . . . .	178
4.3 Lyapunov Stability of Linear Systems . . . . .	179
4.4 The Routh–Hurwitz Criterion . . . . .	184
4.4.1 The Routh Table . . . . .	189
4.5 Algebraic Stability Tests for Discrete Systems . . . . .	198
4.5.1 Jury's Test . . . . .	198
4.5.2 Bilinear Transformation and the Routh–Hurwitz Method . . . . .	201
4.6 Frequency Domain Stability Study . . . . .	203
4.7 MATLAB Laboratory Experiment . . . . .	211
4.8 References . . . . .	213
4.9 Problems . . . . .	215

<b>5. Controllability and Observability</b>	<b>221</b>
5.1 Observability of Discrete Systems	223
5.2 Observability of Continuous Systems	225
5.3 Controllability of Discrete Systems	227
5.4 Controllability of Continuous Systems	229
5.5 Additional Controllability/Observability Topics	233
5.6 Observer (Estimator) Design	241
5.6.1 Full-Order Observer Design	241
5.6.2 Reduced-Order Observer (Estimator)	244
5.7 MATLAB Case Study: F-8 Aircraft	247
5.8 MATLAB Laboratory Experiment	249
5.9 References	252
5.10 Problems	253
<b>PART II — ANALYSIS AND DESIGN</b>	
<b>6. Transient and Steady State Responses</b>	<b>261</b>
6.1 Response of Second-Order Systems	262
6.2 Transient Response Parameters	266
6.3 Transient Response of High-Order Systems	269
6.4 Steady State Errors	276
6.5 Response of High-Order Systems by MATLAB	281
6.6 Control System Performance Specifications	283
6.7 MATLAB Laboratory Experiment	285
6.8 References	287
6.9 Problems	287
<b>7. Root Locus Technique</b>	<b>291</b>
7.1 Introduction	291
7.2 Construction of the Root Locus	296
7.3 Motivation for Time Domain Controller Design	312
7.4 Discrete-Time Root Locus	318
7.5 MATLAB Case Studies	318
7.5.1 Case Study: F-8 Aircraft	318
7.5.2 Case Study: A Synchronous Machine	320
7.6 MATLAB Laboratory Experiments	322
7.6.1 Hydro Power Plant Experiment	322
7.6.2 Discrete-Time Root Locus Experiment	324
7.7 References	325
7.8 Problems	326

<b>8. Time Domain Controller Design</b>	<b>331</b>
8.1 Introduction	331
8.2 State Feedback and Pole Placement	333
8.3 Common Dynamic Controllers	337
8.3.1 PD Controller	338
8.3.2 PI Controller	338
8.3.3 PID Controller	339
8.3.4 Phase-Lag Controller	339
8.3.5 Phase-Lead Controller	339
8.3.6 Phase-Lag-Lead Controller	340
8.4 Rate Feedback Control	340
8.5 Compensator Design by the Root Locus Method	342
8.5.1 Improvement of Steady State Errors	343
8.5.2 Improvement of Transient Response	353
8.5.3 PID and Phase-Lag-Lead Controller Designs	364
8.6 MATLAB Case Studies	369
8.6.1 Ship Stabilization by a PD Controller	369
8.6.2 PID Controller for a Voltage Regulator Control System	371
8.7 Comments on Discrete-Time Controller Design	374
8.8 MATLAB Laboratory Experiment	374
8.9 References	375
8.10 Problems	375
<b>9. Frequency Domain Controller Design</b>	<b>381</b>
9.1 Introduction	381
9.2 Frequency Response Characteristics	382
9.3 Bode Diagrams	385
9.3.1 Phase and Gain Stability Margins from Bode Diagrams	392
9.3.2 Steady State Errors and Bode Diagrams	394
9.4 Compensator Design Using Bode Diagrams	399
9.4.1 Phase-Lag Controller	401
9.4.2 Phase-Lead Controller	402
9.4.3 Phase-Lag-Lead Controller	403
9.4.4 Compensator Design with Phase-Lead Controller	404
9.4.5 Compensator Design with Phase-Lag Controller	410
9.4.6 Compensator Design with Phase-Lag-Lead Controller	413

9.5 MATLAB Case Study . . . . .	417
9.6 Comments on Discrete-Time Controller Design . . . . .	423
9.7 MATLAB Laboratory Experiment . . . . .	424
9.8 References . . . . .	426
9.9 Problems . . . . .	426
<b>10. Control System Theory Overview . . . . .</b>	<b>433</b>
10.1 Time-Varying Systems . . . . .	434
10.2 Stochastic Linear Control Systems . . . . .	437
10.3 Optimal Linear Control Systems . . . . .	440
10.3.1 Optimal Deterministic Regulator Problem . . . . .	441
10.3.2 Optimal Kalman Filter . . . . .	444
10.3.3 Optimal Stochastic Regulator Problem . . . . .	447
10.4 Linear Time-Delay Systems . . . . .	448
10.5 System Identification and Adaptive Control . . . . .	450
10.5.1 System Identification . . . . .	450
10.5.2 Adaptive Control . . . . .	452
10.6 Nonlinear Control Systems . . . . .	454
10.7 Comments . . . . .	456
10.8 References . . . . .	457
<b>Appendix . . . . .</b>	<b>463</b>
A. Laplace Transform . . . . .	464
A.1 Definition of the Laplace Transform and its Main Property . . . . .	464
A.2 Tables of Properties and Common Pairs . . . . .	466
B. $\mathcal{Z}$ -Transform . . . . .	469
B.1 Definition of the $\mathcal{Z}$ -Transform and its Main Property . . . . .	469
B.2 Relation between the $\mathcal{Z}$ and Laplace Transforms . . . . .	471
B.3 Tables of Properties and Common Pairs . . . . .	473
C. Some Results from Linear Algebra . . . . .	475
D. MATLAB Manual . . . . .	479
MATLAB Tutorial—Linear Systems and Control . . . . .	479
<b>Index . . . . .</b>	<b>491</b>
