Preface	xv
About the Author	xvii
1. Introduction to Linear Systems	1
1.1 Continuous and Discrete Linear Systems and Signals	2
1.1.1 Continuous and Discrete Signals and Sampling	3
1.1.2 Continuous- and Discrete-Time Systems	5
1.2 System Linearity and Time Invariance	13
1.2.1 System Linearity	13
1.2.2 Linear System Time Invariance	16
1.3 Mathematical Modeling of Systems	18
1.4 System Classification	24
1.5 MATLAB System Analysis and Design	26
1.6 Organization of the Text	27
1.7 Summary	28
1.8 References	29
1.9 Problems	30
2. Introduction to Signals	33
2.1 Common Signals in Linear Systems	33
2.1.1 Impulse Delta Signal	42
2.2 Signal Operations	51
2.3 Signal Classification	56
2.4 MATLAB Laboratory Experiment on Signals	58
2.5 Summary	59
2.6 References	62
2.7 Problems	63
PART I — FREQUENCY DOMAIN TECHNIQUES	
3. Fourier Series and Fourier Transform	73
3.1 Fourier Series	74
3.3.1 From Fourier Series to Fourier Transform	84
3.2 Fourier Transform and Its Properties	86
3.2.1 Properties of the Fourier Transform	88
3.2.2 Inverse Fourier Transform	104

3.3 Fourier Transform in System Analysis	106
3.3.1 System Transfer Function and System Response	107
3.3.2 Frequency Spectra	110
3.4 Fourier Series in System Analysis	116
3.4.1 System Response to Periodic Inputs	116
3.4.2 System Response to Sinusoidal Inputs	121
3.5 From Fourier Transform to Laplace Transform	124
3.5 Fourier Analysis MATLAB Laboratory Experiment	127
3.6 Summary	128
3.7 References	131
3.8 Problems	132
4. Laplace Transform	143
4.1 Laplace Transform and Its Properties	144
4.1.1 Definitions and Existence Conditions	144
4.1.2 Properties of the Laplace Transform	146
4.2 Inverse Laplace Transform	157
4.3 Laplace Transform in Linear System Analysis	165
4.3.1 System Transfer Function and Impulse Response	166
4.3.2 System Zero-State Response	170
4.3.3 Unit Step and Ramp Responses	173
4.3.4 Complete System Response	175
4.3.5 Case Studies	179
4.4 Block Diagrams	183
4.5 From Laplace to the \mathcal{Z} -Transform	189
4.6 MATLAB Laboratory Experiment	191
4.7 Summary	192
4.8 References	195
4.9 Problems	196
5. The \mathcal{Z} Transform	209
5.1 The \mathcal{Z} Transform and Its Properties	209
5.2 Inverse of the \mathcal{Z} Transform	222
5.3 The \mathcal{Z} Transform in Linear System Analysis	228
5.3.1 Two Formulations of Discrete-Time Linear Systems	228
5.3.2 System Response Using the Integral Formulation	232
5.3.3 System Response Using the Derivative Formulation	242
5.3.4 Case Study: An ATM Computer Network Switch	249
5.4 Block Diagrams	254
5.5 Discrete-Time Frequency Spectra	258
5.5.1 System Response to Sinusoidal Inputs	260

5.6 MATLAB Laboratory Experiment	262
5.7 Summary	263
5.8 References	266
5.9 Problems	267

PART II — TIME DOMAIN TECHNIQUES

6. Convolution and Correlation	279
6.1 Convolution of Continuous-Time Signals	280
6.1.1 Graphical Convolution	283
6.2 Convolution for Linear Continuous-Time Systems	292
6.3 Convolution of Discrete-Time Signals	296
6.3.1 Sliding Tape Method	298
6.4 Convolution for Linear Discrete-Time Systems	303
6.5 Numerical Convolution using MATLAB	305
6.6 MATLAB Laboratory Experiments on Convolution	309
6.6.1 Convolution of Signals	309
6.6.2 Convolution for Linear Dynamic Systems	310
6.7 Summary	311
6.8 References	312
6.9 Problems	312
7. System Response in Time Domain	319
7.1 Solving Linear Differential Equations	319
7.2 Solving Linear Difference Equations	327
7.3 Discrete-Time System Impulse Response	335
7.3.1 Direct Method for Finding the Impulse Response	335
7.3.2 Impulse Response by Linearity and Time Invariance	338
7.4 Continuous-Time System Impulse Response	343
7.5 Complete Continuous-Time System Response	348
7.6 Complete Discrete-Time System Response	349
7.7 Stability of Continuous-Time Linear Systems	352
7.7.1 Internal Stability of Continuous-Time Linear Systems	352
7.7.2 The Routh-Hurwitz Stability Criterion	355
7.7.3 Continuous-Time Linear System BIBO Stability	363
7.8 Stability of Discrete-Time Linear Systems	364
7.8.1 Internal Stability of Discrete-Time Linear Systems	365
7.8.2 Algebraic Stability Tests for Discrete Systems	367
7.8.3 Discrete-Time Linear System BIBO Stability	369

7.9 MATLAB Experiment on Continuous-Time Systems	371
7.10 MATLAB Experiment on Discrete-Time Systems	373
7.11 Summary	373
7.12 References	379
7.13 Problems	379
8. State Space Approach	389
8.1 State Space Models	391
8.2 Time Response from the State Equation	396
8.2.1 Time Domain Solution	396
8.2.2 Solution Using the Laplace Transform	401
8.2.3 State Space Model and Transfer Function	404
8.2.4 Impulse and Step Responses	405
8.3 Discrete-Time Models	407
8.3.1 Difference Equations and State Space Form	407
8.3.2 Discretization of Continuous-Time Systems	408
8.3.3 Solution of the Discrete-Time State Equation	411
8.3.4 Solution Using the \mathcal{Z} -transform	413
8.3.5 Discrete-Time Impulse and Step Responses	416
8.4 System Characteristic Equation and Eigenvalues	418
8.5 Cayley-Hamilton Theorem	421
8.6 Linearization of Nonlinear Systems	426
8.7 State Space MATLAB Laboratory Experiments	433
8.7.1 Experiment 1—The Inverted Pendulum	433
8.7.2 Experiment 2—Response of Continuous Systems	435
8.7.3 Experiment 3—Response of Discrete Systems	437
8.8 Summary	438
8.9 References	442
8.10 Problems	443

PART III — SYSTEMS IN ELECTRICAL ENGINEERING

9. Signals in Digital Signal Processing	459
9.1 Sampling Theorem	459
9.1.1 Sampling with an Ideal Sampler and DTFT	465
9.1.2 Sampling with a Physically Realizable Sampler	467
9.2 Discrete-Time Fourier Transform (DTFT)	469
9.2.1 DTFT in Linear Systems	476
9.2.2 From DTFT to the Double-Sided \mathcal{Z} Transform	478
9.3 Double Sided \mathcal{Z} -Transform	480
9.3.1 Double Sided \mathcal{Z} -Transform in Linear Systems	484

9.4 Discrete Fourier Transform (DFT)	485
9.4.1 Fast Fourier Transform (FFT)	490
9.5 Discrete-Time Fourier Series (DFS)	491
9.6 Correlation of Discrete-Time Signals	493
9.7 IIR and FIR Filters	495
9.8 Laboratory Experiment on Digital Signal Processing	497
9.9 Summary	498
9.10 References	502
9.11 Problems	502
10. Signals in Communication Systems	507
10.1 Signal Transmission in Communication Systems	508
10.2 Signal Correlation, Energy and Power Spectra	512
10.3 Hilbert Transform	517
10.4 Ideal Filter	521
10.5 Modulation and Demodulation	522
10.6 Digital Communication Systems	529
10.7 Communication Systems Laboratory Experiment	530
10.8 Summary	532
10.9 References	535
10.10 Problems	535
11. Linear Electrical Circuits	539
11.1 Basic Relations	539
11.1 Equivalence Between Voltage and Current Sources	542
11.2 First-Order Linear Electrical Circuits	543
11.2.1 RC Electrical Circuits	544
11.2.2 RL Electrical Circuits	549
11.3 Second-Order Linear Electrical Circuits	554
11.3.1 Cascade LC Circuit Driven by a Voltage Source	554
11.3.2 Series Connection of R, L, and C Elements	557
11.3.3 Parallel Connection of R, L, and C Elements	559
11.4 Higher-Order Linear Electrical Circuits	559
11.5 MATLAB Laboratory Experiment	563
11.6 Summary	563
11.7 References	564
11.8 Problems	564
12. Linear Control Systems	569
12.1 The Essence of Feedback	570
12.2 Transient Response of Second-Order Systems	575
12.2.1 Transient Response of Higher-Order Systems	579

12.3 Feedback System Steady State Errors	581
12.4 Feedback System Frequency Characteristics	585
12.5 Bode Diagrams	587
12.6 Common Dynamic Controllers: PD, PI, PID	599
12.7 Laboratory Experiment on Control Systems	601
12.8 Summary	603
12.9 References	605
12.10 Problems	606
Appendices	611
A. Linear Algebra	611
B. Some Results from Calculus	619
C. Introduction to MATLAB	622
D. Introduction to SIMULINK	632
Index	637
