Quick spot alot at RU Parking

Blockchain customer information privacy

Information exchange for combine pay and slots availability

Right size parking

Blacklisted car detection

docker

Why Us?

- Multi-level parking as per vehicle sizes
- Customer reserve spot online and secured payment is done through the garage website
- Dynamic charging according to the time of the day
- Combined payment if customers are parking at multiple locations in a day
- The system support providing of slots availability information at nearby garage location
- Different size vehicle parking like car,van,truck,motorcycle etc
- Easy to use website for reservation of parking slots

How it Works

- Customer can make reservation in advance or walk-ins depending on availability
- Walk-ins will have to make reservation on the spot and pre-booked customers license plate will be scanned to check the details of reservation and starting the reservation hours
- On starting the reservation hour an email with the reservation details sent to the customers
- Before the reservation time expiry the customers will be notified incase of slot time extension
- Bonus time for frequent customers
