# Project Overview

- Virtual Stock Application run on a web platform
  - Python, [Django Framework](#) (MVC)
  - Real-time link to Yahoo finance for stock information
- Trade stock without risking real money in fun leagues with friends
- Central location to learn about the stock market (news, how it works, trading)... all while having fun!
- Similar to [MarketWatch](#), a popular Virtual Stock Exchange Game site

# Target Audience

- People who want to...
  - Learn more about the stock market, and trading, without risking real money
  - Play against friends by trading stocks, and bonds
- Companies who need to...
  - Train their employees on the stock market
- Advertisers who want to...
  - Advertise on our site!

# Key Features

- Allows users to trade *real* market products (Stocks, Funds, ETFs) using virtual money
- Competitive leagues to play against friends
- Tutorials to learn how the stock market works
- Portfolio investment suggestion system
- Investment information consolidated into a single site (News feeds, Stock Quotes, Market Data)

# Demo!

- Let's take a look and see what our team has completed so far!

# Target Goals & Objectives

- Enhancement to current features
  - Clearer UI, user-friendly colors (e.g. green numbers for a *gain*, and red for *loss*)
- Management functionality
  - League Manager
  - Site Administration
- Tutorial system
- Suggest-a-stock features
- Watch list of stocks
- Originally proposed, yet very unlikely: Mobile Application
